This code book is a way for you to record basic information about your grafts locally in conjunction with RFID tags and the Guerrilla Grafters' phone app.

Download the app here: http://guerrillagrafters.org/rfid/. You can order a kit with some starter RFID tags from us for $6 here http://guerrillagrafters.org/kits/.

When you go grafting, you can store data about your graft and embed the tag on or near the tree.

Nail the RFID into the side of the tree (stainless steel or galvanized nails are best), or if you think the tree might not like that, find another safe place to tape it or tuck it nearby where it can withstand weather and city conditions.

Use this code book to code and decode a string of letters and numbers that correspond to the genus, species, varietal, date, and branch location of the grafted trees (est the information gets into nefarious hands!. For example
